<http://jiscreposit.blogspot.com>

Increase
engagement with
repositories
by simplifying the
method of deposit

Who Are We?

KEELE
UNIVERSITY

intraLibrary™

UNIVERSITY OF
EXETER

What is the set up?

Exeter/Plymouth

Keele

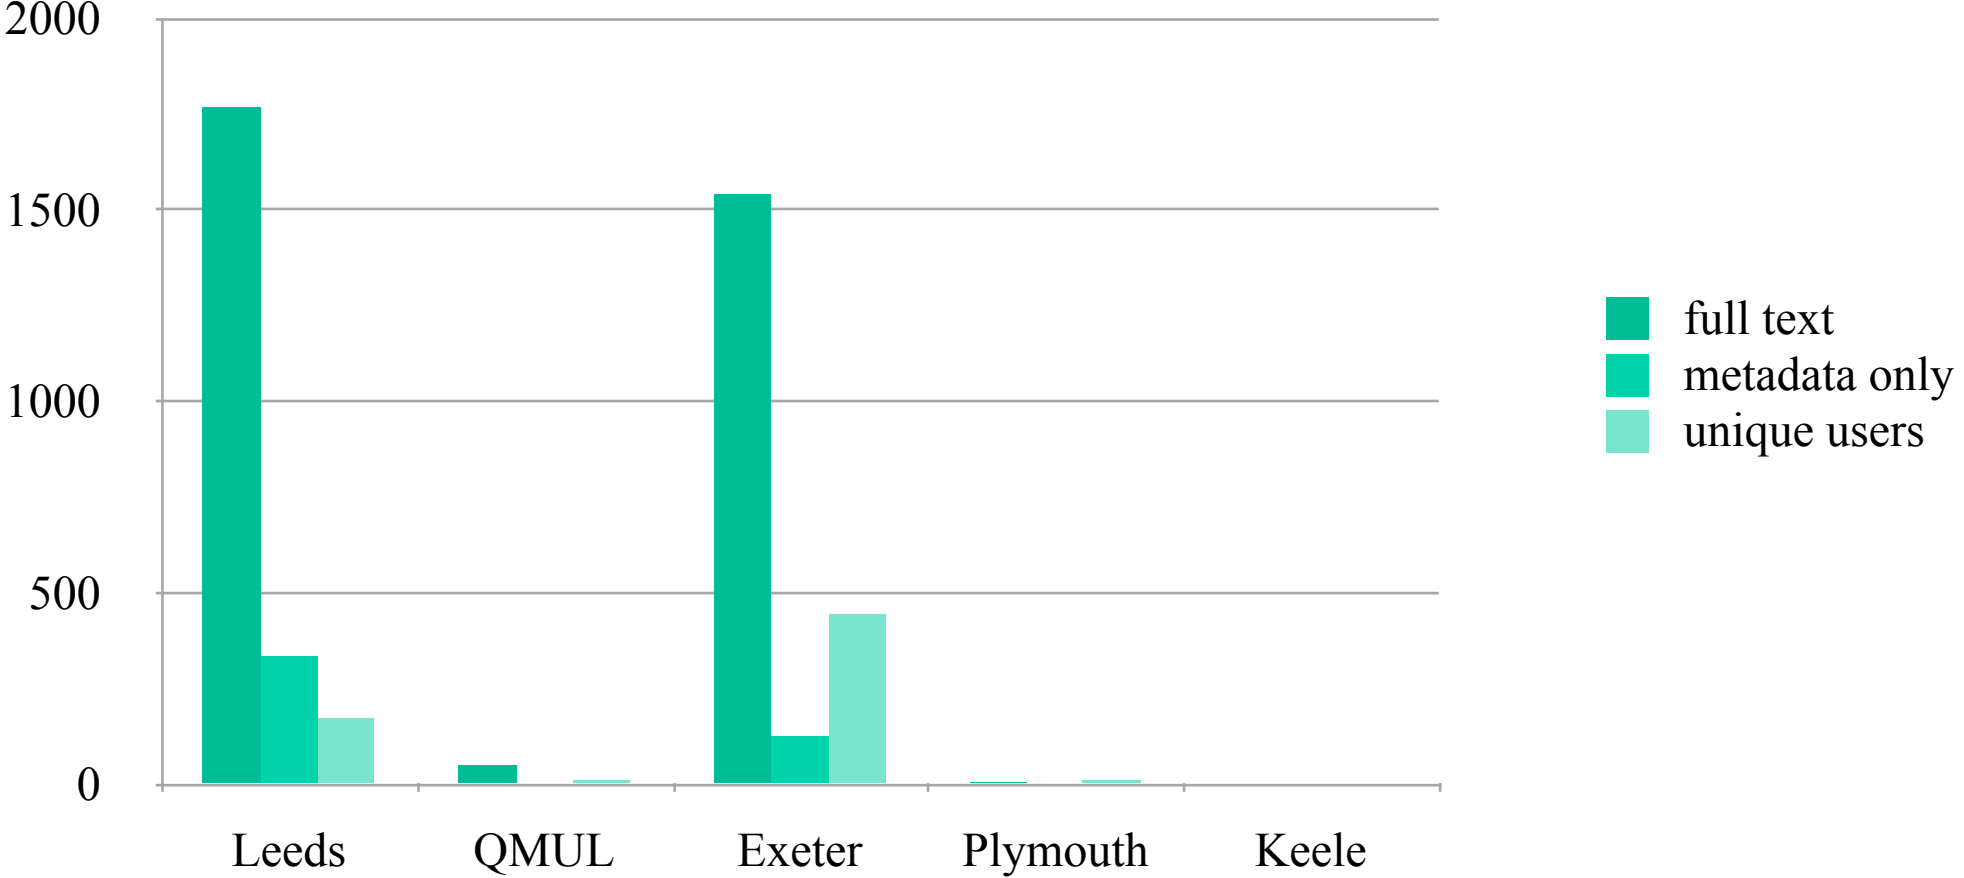

Leeds

Queen Mary

Where is each HEI up to?

Outcomes

ways that we hope we'll change the world through the project ...

Increased deposits

WANTED: your research

- **MORE** engagement
- **MORE** unique users
- **MORE** submissions

WANTED: your research

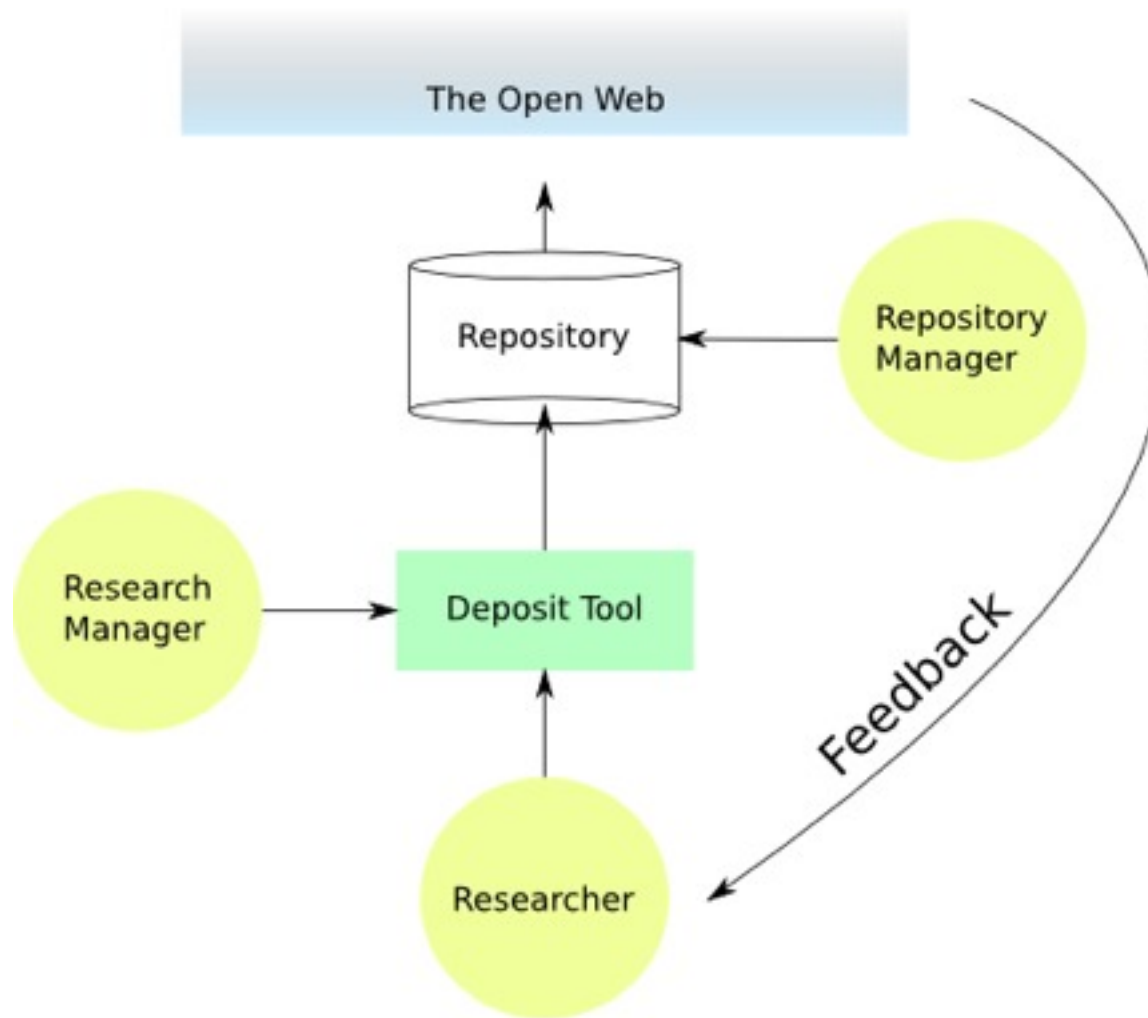

- **MORE** engagement
- **MORE** unique users
- **MORE** submissions

**It's the CRIS to repository model
that will get everyone talking
..... AND depositing**

Increased engagement with community

Increased knowledge in the community in the CRIS to Repository model

Outputs

re-usable artefacts of the project ...

Survey

How do users get on with the software?

What are the advantages and disadvantages of this approach to deposit?

Where else would these kinds of interfaces be useful?

Training materials

I am giving a: workshop | talk | session

to: academics | senior management

for: 15 minutes | an hour | half a day

What do I need to tell them?

What materials would be useful?

Advocacy

- strategies learnt from project workshops
- messages: how / who / when
- seamless research environment or big splash launch?
- top down or bottom up?
- policies or communicate benefits?

New since last time: [1 message](#)

Hello and welcome to the RePosit project Google group.

The RePosit project is a JISC-funded collaboration between five Higher Education Institutions (and Symplectic Ltd as commercial partner), all of whom use or are in the process of migrating to use a publications management system as a primary deposit interface to their digital repositories. The project aims to enhance the uptake of this interface within each institution and to develop training and support materials, which will be of use to the wider deposit community.

As part of the project's dissemination plans, this Google group has been set up as a forum for discussion of topics related to improving the quantity and quality of deposits of full-text in repositories, and the pitfalls to avoid with training and advocacy towards those aims, and is open to all interested parties.

See <http://jiscreposit.blogspot.com/> for more project details.

RePosit: positing a new kind of repository deposit

The RePosit Project, funded by JISC, seeks to increase uptake of a web-based repository deposit tool embedded in a researcher-facing publications management system. Institutions involved in RePosit are University of Leeds (Chair), Keele University, Queen Mary University of London, University of Exeter and University of Plymouth, with Symplectic Ltd as a commercial partner.

Literature Review: EM-Loader project

The EM-Loader project demonstrated a new workflow for batch deposit of a researcher's publications to an institutional repository using the SWORD interface, with a sample implementation connecting PublicationsList to the Depot's installation of ePrints.

As well as the investigation, and development, of the SWORD interface, resulting in a new API and improved user workflow, the project also addressed two key problems:

- the motivation problem, by focussing on providing tools to save researcher time in maintaining their personal publications list on the web;
- the usability problem, by importing metadata in batch mode where possible (from online data services) and submitting the items to the repository in batch mode too.

Key findings that may be relevant to RePosit

Benefits - the project identified the need to sell the likely benefits of an institutional repository to the academic as part of any advocacy for tools, and noted the use of both carrots (improved search index rank, longer term storage, etc.) and sticks (research assessment exercise, open access mandate).

Non-engagement - it is just as important to consider the reasons why a researcher would not want to use their repository, e.g. an early bad experience, the effort required to populate metadata and so on.

Web page as the focus - the project identified the advantages of making the researcher's web page as the focus of deposit, noting the possible rewards and likely engagement, especially if the workflow reduces effort on the academic's behalf.
